RATE THIS SOLUTION

Situation:

You need detailed system requirements for Symantec AntiVirus for Linux 1.0.

Solution:

Symantec AntiVirus requires specific kernels, software, and hardware to run on the Linux operating system.

All requirements for Symantec AntiVirus components are designed to work with the hardware and software recommendations for the supported computers. All Linux computers on which you are installing Symantec AntiVirus should meet or exceed the recommended system requirements for the operating system.

Hardware system requirements

Symantec AntiVirus for Linux requires the following hardware capabilities:

- Intel™ Pentium™ II 266 MHz or higher processor
- 256 MB RAM
- 80 MB free disk space

Software system requirements

Symantec AntiVirus supports the following Linux distributions:

- Red Hat® Enterprise Linux 3.0 ES (RHEL3ES)

- SuSE™ LINUX Enterprise Server 9 (SLES9)
- Novell® Linux Desktop 9 (NLD9)

These distributions are supported on computers using Intel 486/586/686-compatible CPUs.

Supported distributions and kernel versions

Symantec AntiVirus for Linux 1.0 supports the following distributions:

Operating system	Kernel version
Red Hat Enterprise Linux 3.0 ES	2.4.21-4.EL
Red Hat Enterprise Linux 3.0 ES	2.4.21-4.E-smp
Red Hat Enterprise Linux 3.0 ES	2.4.21-27.0.1.EL
Red Hat Enterprise Linux 3.0 ES	2.4.21-27.0.1.E-smp
